

INTEGRATED SECURITY SYSTEMS, INC. ANNOUNCES B&B ARMR CORPORATION PROVIDES PROTECTIVE BARRIER SYSTEMS FOR ASIAN PETRO-CHEMICAL FACILITY

CARROLLTON, TEXAS – December 5, 2008 – [B&B ARMR Corporation](#), a subsidiary of Integrated Security Systems, Inc. (OTCBB Symbol: IZZI), announced today that they have completed a project valued at over \$100,000 to supply B&B ARMR Model 820 barriers to a major regional petro-chemical storage and distribution facility in Southeast Asia. The new barriers will increase security and allow for improved traffic flow within the facility.

With a U.S. Department of State certification of K12, the [820 Model](#) has been successfully crash tested and can completely immobilize a 15,000 lb vehicle traveling at speeds up to 50 mph with zero penetration. This allows a petro-chemical facility - or any other high risk facility - the ability to prevent unauthorized entry into restricted areas as well as being an effective deterrent to vehicular terrorism attempts. The B&B Model 820 barriers provide the highest level of perimeter protection and can deploy in under one second. The 820 model is just one of B&B ARMR's products that are ideal for providing perimeter security and traffic control for any low, medium or high risk facility.

This location joins other petro-chemical facilities, both domestic and international, that rely on B&B ARMR products for their perimeter security and defense needs.
