- **Stops 15,000 lb. @ 30 mph (6804 kg @ 48 km/h)**
- **Hydraulic pumping unit enclosed within the operator to protect against environment**
- **No excavation needed**
- **Fully operational within 15 minutes**
- **Simple re-location with minimal effort**

Instant Protection and Control

B&B ARMR’s Model 850 Portable Barrier is designed to be rapidly deployed in an emergency situation and fully operational within 15 minutes. With a crash rating of K4, the portable barrier presents a formidable deterrent capable of stopping a 15,000 pound (6804 kg) vehicle traveling at 30 mph (48 km/h). The barrier may be towed into position using a truck, and once in place, the barrier is lowered into position with built-in jacks.

With a clear opening of 12 feet, B&B ARMR’s Model 850 portable barrier can serve as an instant road block for event control or areas where foundation work cannot be safely or quickly poured. On unpaved or uneven road surfaces, the stabilizers on the back side of the unit serve as additional reinforcement, and to further increase the stopping capacity of Model 850, optional jersey barriers may be used in place of the stabilizers.

B&B ARMR’s portable barrier has been fully tested by an independent testing facility and certified by U.S. Department of Defense. The electro-hydraulic version of the Model 850 portable barrier utilizes standard relay logic which will allow the control of the barrier with the supplied up/down push button control station, Custom panels with locking features, indicator lights and custom graphics are also available as an option. Additional devices may also be used to enhance the barrier performance including barrier gate operators and traffic lights.
